• Riyadh, Saudi Arabia

## PROFILE

Cybersecurity-focused computer science undergraduate specializing in network defence, risk management, and secure system design across enterprise environments. Experienced in vulnerability assessment, penetration testing, and implementation of cybersecurity best practices using industry-standard tools such as Nmap, Metasploit, and Wireshark. Hands-on exposure to compliance frameworks, security documentation, and cybersecurity governance aligned with organizational and regulatory standards.

## AREAS OF EXPERTISE

- Cybersecurity
- Network Security
- Vulnerability Assessment
- Penetration Testing
- Security Operations
- Risk Assessment
- Incident Response
- Threat Analysis
- Secure Network Architecture
- VLAN Segmentation
- Access Control (ACLs)
- Identity and Access Management
- Compliance & Governance
- Cloud Security (AWS)
- Security Monitoring

## PROFESSIONAL EXPERIENCE

### Cybersecurity Intern Cyber Security World (CWS)

Developed hands-on cybersecurity operations experience through monitoring, analyzing, and securing digital systems and networks. Facilitated vendor registration and cybersecurity documentation processes for major organizations such as Saudi Aramco and SABIC. Coordinated with technical teams to ensure adherence to cybersecurity standards, policies, and regulatory compliance requirements.

- Contributed to cybersecurity compliance activities, including preparation and issuance of CCC (Cybersecurity Compliance Certificate) documentation.
- Participated in risk assessment activities, security monitoring, and execution of cybersecurity best practices to strengthen organizational security posture.

## KEY PROJECTS

### Sentiment Analysis for Mental-Health Monitoring from Social Media (SAMHM)

#### Final Year Capstone Project I | Security & DevOps Lead

- Architected a research-driven AI system for analyzing public social-media text using NLP techniques to support early mental-health awareness initiatives.
- Benchmark-tested sentiment analysis and transformer-based models (TF-IDF + SVM, DistilBERT, BERT) through literature review and defined performance evaluation metrics.
- Orchestrated security, privacy, and DevOps planning by specifying consent management, data minimization, anonymization protocols, and CI/CD deployment workflows.

### Secure Wireless Network & Penetration Testing

- Engineered VLAN-segmented secure wireless network architecture to improve segmentation, security, and controlled access across network environments.
- Performed simulated penetration testing using tools such as Nmap and Metasploit to identify vulnerabilities and evaluate overall network resilience.

---

## KEY PROJECTS CONTINUED

---

### **Fitness Tracker Application (Java)**

- Engineered an object-oriented fitness tracking application featuring goal setting, progress visualization, and persistent data storage functionality.

### **Healthcare Data Analytics using Hadoop, Hive & Impala**

- Developed a healthcare data pipeline using Hadoop ecosystem technologies (HDFS, MapReduce, Hive, and Impala) to support batch and near real-time analytics on 55K+ records.
- Delivered actionable insights into billing patterns, patient readmissions, and disease trends to support data-driven healthcare decision-making.

### **Uber Data Breaches (2016 & 2022) – Cybersecurity, Ethics & Legal Analysis**

- Executed in-depth technical analysis of Uber’s 2016 and 2022 data breaches, examining credential exposure, social engineering tactics, MFA fatigue, and access control failures.
- Critically assessed ethical dimensions of the breaches using Deontological, Utilitarian, and Virtue Ethics frameworks to evaluate professional responsibility and misconduct.
- Interpreted legal and regulatory implications across U.S. and EU (GDPR) jurisdictions, identifying compliance gaps and accountability risks.
- Formulated preventive cybersecurity strategies, including Zero Trust architecture, Identity and Access Management (IAM) enhancements, and governance reforms to reduce future breach risk.

### **OECD Municipal Waste Dashboard – SDG 12.5 Data Visualization**

- Built interactive Tableau dashboards analyzing 30+ years of OECD municipal waste data to support long-term sustainability insights.
- Designed multi-filter dashboard views, annotations, and comparative visualizations to enable cross-country analysis of waste management trends.

### **EcoCycle 2.0 – Smart Recycling & Sustainability Platform**

- Created a high-fidelity mobile application prototype aimed at improving recycling accuracy and user engagement aligned with SDG 12.
- Applied User-Centered Design (UCD) and Agile methodologies, including user flows, storyboarding, and usability evaluation to refine the product experience.
- Conceptualized an integrated digital solution incorporating AI-based waste recognition, AR-assisted sorting guidance, IoT-enabled smart-bin verification, and a blockchain-based eco-credit system.

---

## EDUCATION

---

### **Bachelor of Computer Science (Specialized in Cyber Security – Extension on Data Science)**

Taylor’s University, Malaysia - 2026

---

## CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

---

- CCNA (Cisco Certified Network Associate), CSC015042665
- Java Foundations – Oracle Certified
- AWS Cloud Practitioner Essentials
- Salesforce Certification – CRM Fundamentals & Cloud Platform
- CompTIA Security+ (SY0-701) – In-progress
- Dean's List – Taylor's University  
(4 semesters, awarded for achieving a semester GPA above 3.5)  
Recognized for outstanding academic performance

---

## TECHNICAL PROFICIENCIES

---

- **Programming & Development:** Python, Java, C++, R, MySQL, Next.js
- **Cybersecurity & Network Security:** Kali Linux, Metasploit, Wireshark, Nmap, Access Control Lists (ACLs), Port Security
- **Networking & Infrastructure:** IP Addressing & Subnetting, VLAN Segmentation, OSPF Routing, Network Troubleshooting
- **Data Science & Machine Learning:** Exploratory Data Analysis (EDA), Data Preprocessing & Feature Engineering, Classification (KNN), Regression (Linear & Decision Tree), Clustering (K-Means, DBSCAN), Association Rule Mining (Apriori)
- **Tools & Platforms:** Tableau Public, VirtualBox, Cisco Packet Tracer, Cloudera, Figma
